ANT 6973: DATA VISUALIZATION AND EXPLORATION

RESHAPING DATA

TODAY'S TOPICS

- Tidy data
- Reshaping from wide to long
- Reshaping from long to wide

WRANGLING
RESHAPING
MANIPULATION
MUNGING
TRANSFORMATION

MAYBE >50% OF YOUR TIME

TYPICAL GOALS

- Clean and error-check the data
- Make the data suitable to use with particular software
 - Plotting
 - Statistical tests
- Reveal information

PACKAGES FOR WORKING WITH DATA

tidyr

Both are part of core

library("tidyverse")

dplyr

PACKAGES FOR WORKING WITH DATA

tidyr

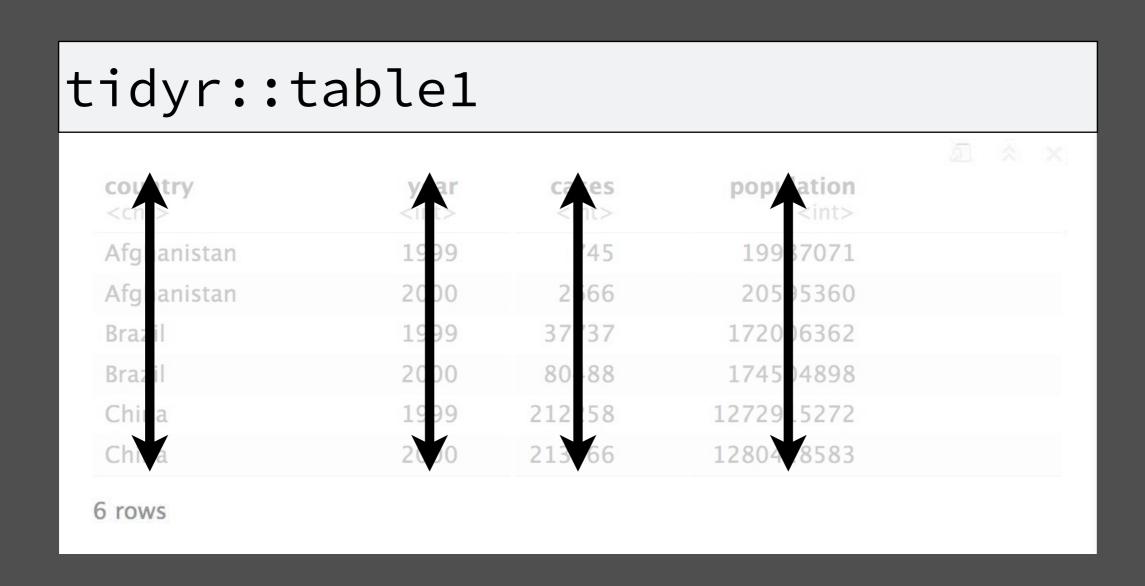

Create tidy data by reshaping

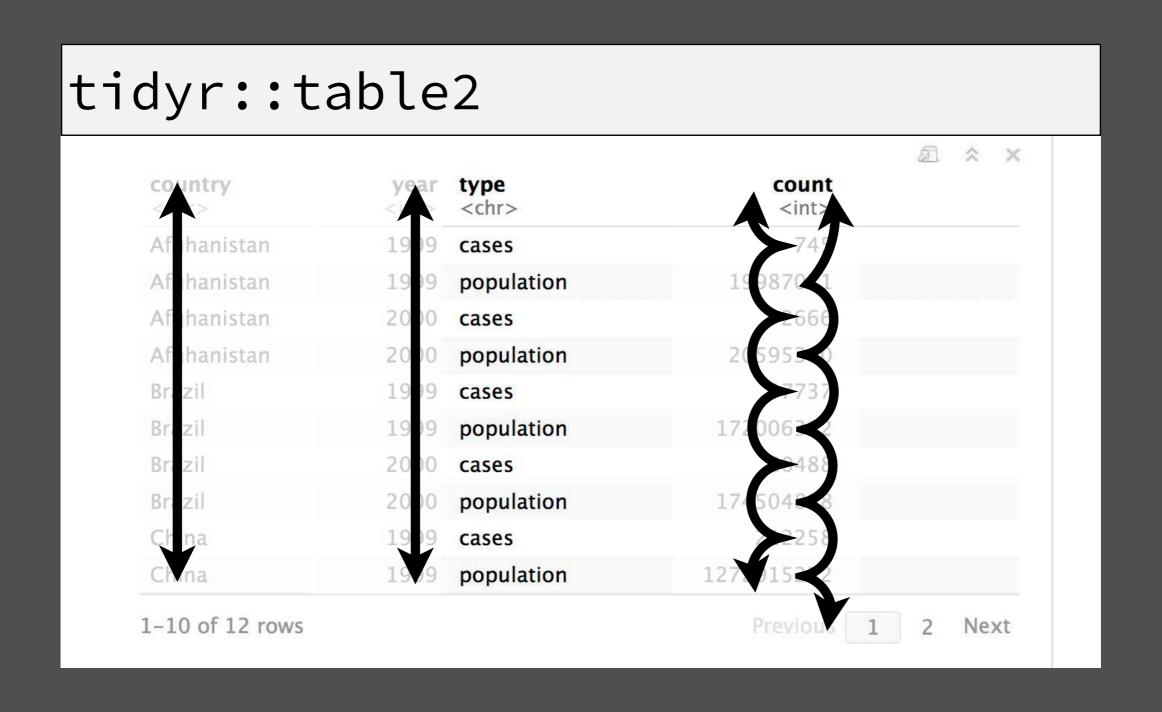

dplyr

Manipulate and summarize data

WHAT ARE THE VARIABLES IN THIS DATA SET?

WHAT ARE THE VARIABLES IN THIS DATA SET?

China	1272915272	1280428583

3 rows

OTHER (BAD) IDEAS

tidyr::table5

	country <chr></chr>	century <chr></chr>	year <chr></chr>	rate <chr></chr>
1	Afghanistan	19	99	745/19987071
2	Afghanistan	20	00	2666/20595360
3	Brazil	19	99	37737/172006362
4	Brazil	20	00	80488/174504898
5	China	19	99	212258/1272915272
6	China	20	00	213766/1280428583

TIDY DATA

- Data sets come in **many** different formats.
- Often data are in a format that facilitates data entry rather than data analysis.
- Most software for scientific computing (including R and SPSS) prefers just one format.

A data set is **tidy** if:

- 1. Each **variable** is in its own **column**
- 2. Each case is in its own row
- 3. Each value is in its own cell

EXAMPLE: CONTINGENCY TABLE

	Survived	Died
Drug	15	3
Placebo	4	12

Is this tidy?

REORGANIZE TO MAKE IT TIDY

	Survived	Died
Drug	15	3
Placebo	4	12

Not tidy

Treatment	Outcome	Count
Drug	Survived	15
Drug	Died	3
Placebo	Survived	4
Placebo	Died	12

Tidy

RESHAPING BY HAND IS NOT ALWAYS SO SIMPLE...

A wide version of gapminder life expectancy data

... (hundreds more rows)

HOW CAN WE CONVERT BETWEEN WIDE AND LONG FORMATS?

RESHAPE DATA

RESHAPING "VERBS"

- pivot_longer()*: reshape from wide to long
- pivot_wider()*: reshape from long to wide
- separate(): split a column with multiple values
- unite(): combine multiple columns into one

* New & better alternatives to gather() and spread()

pivot_longer()

PRACTICE DATA

37:1 (Top Level)

DE	5800	6000	6200
US	15000	14000	13000

ACTIVITY 2

 Use pivot_longer() to reorganize table4a into three columns: country, year, and cases.

	country <chr></chr>	1999 <int></int>	2000 <int></int>
1	Afghanistan	745	2666
2	Brazil	37737	80488
3	China	212258	213766
3 r	OWS		

SOLUTION

table4a %>%
 pivot_longer(cols = 2:3, names_to = "year", values_to = "cases")

	country <chr></chr>	1999 <int></int>	2000 <int></int>
1	Afghanistan	745	2666
2	Brazil	37737	80488
3	China	212258	213766
3 r	OWS		

country <chr></chr>	year <chr></chr>	cases <int></int>
Afghanistan	1999	745
Afghanistan	2000	2666
Brazil	1999	37737
Brazil	2000	80488
China	1999	212258
China	2000	213766
6 rows

                    size = c("large", "small",
                                                                                           amount = ...)
18:1 C Chunk 2
```

WHAT ARE THE VARIABLES?

c1.y	sile	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beiling	large	121
Being	small	56

- City
- Particle size
- Amount of particulate

TO MAKE A SCATTER PLOT OF OF LARGE VS. SMALL PARTICLE AMOUNTS, WHAT COLUMNS WOULD WE NEED?

city	size	amount
New York	large	> 23 A
New York	small	14
London	large	>22
London	small	16
Beijing	large	121
Beijng	small	56

- City
- Amount of large
- Amount of small

What is a variable and an observation may depend on your immediate goal!

ACTIVITY 3

Plan (e.g., draw on paper) how this data set would look
if it had the same values grouped into three columns:
city, large, small

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	large	small

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	large	small
New York	23	

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	large	small
New York	23	14

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	large	small	
New York	23	14	
London	22		
		'	

city	size	amount
New York	large	23
New York	small	14
London	large	22

New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	large	small
New York	23	14
London	22	16
Beijing	121	56

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

pivot_wider()

city	large	small
New York	23	14
London	22	16
Beijing	121	56

Variable with new column names

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

New columns

city	large	small
New York	23	14
London	22	16
Beijing	121	56

Transformation logic: column names FROM old variable

Variable with new cell values

New cell values

city	size	amount
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	56

city	large	small
New York	23	14
London	22	16
Beijing	121	56

Transformation logic: cell values **FROM** old variable

pivot_wider()

Data to reshape

pivot_wider()

Old variable that

becomes new

> Old variable that becomes new cell values

pivot_wider()

city <chr></chr>	size <chr></chr>	amount <dbl></dbl>
New York	large	23
New York	small	14
London	large	22
London	small	16
Beijing	large	121
Beijing	small	121

city <chr></chr>	large <dbl></dbl>	small <dbl></dbl>
New York	23	14
London	22	16
Beijing	121	121

ACTIVITY 4

Use pivot_wider() to reorganize table2 into four columns: country, year, cases, and population.

country <chr></chr>	year <int></int>	type <chr></chr>	count <int></int>
Afghanistan	1999	cases	745
Afghanistan	1999	population	19987071
Afghanistan	2000	cases	2666
Afghanistan	2000	population	20595360
Brazil	1999	cases	37737
Brazil	1999	population	172006362
Brazil	2000	cases	80488
Brazil	2000	population	174504898
China	1999	cases	212258
China	1999	population	1272915272
1–10 of 12 rows		Previou	s 1 2 Next

SOLUTION

table2 %>%
 pivot_wider(names_from = type, values_from = count)

country <chr></chr>	year <int></int>	type <chr></chr>	count <int></int>
Afghanistan	1999	cases	745
Afghanistan	1999	population	19987071
Afghanistan	2000	cases	2666
Afghanistan	2000	population	20595360
Brazil	1999	cases	37737
Brazil	1999	population	172006362
Brazil	2000	cases	80488
Brazil	2000	population	174504898
China	1999	cases	212258
China	1999	population	1272915272
1-10 of 12 rows		Previous	1 2 Next

country <chr></chr>	year <int></int>	cases <int></int>	population <int></int>	
Afghanistan	1999	745	19987071	
Afghanistan	2000	2666	20595360	
Brazil	1999	37737	172006362	
Brazil	2000	80488	174504898	
China	1999	212258	1272915272	
China	2000	213766	1280428583	
6 rows				

ACTIVITY 5: TIDY DATA
